

HAAS LATHE OPERATOR TRAINING

TRAIN NEW LATHE OPERATORS IN JUST TWO DAYS!

OVERVIEW

Need a lathe operator fast? No problem! Send us your new employees and in two days we will teach them how to operate your Haas lathe.

In this *fast-tracked, hands-on* class, students learn everything they need to know to effectively run a part. Plus, we share best practices for quality, speed and safety, so every student returns **ready to go!**

This class is geared for beginners - including people with no manufacturing experience. This includes new hires.

“We know skill shortages are bad but we have a solution. In two days, we can train your intended lathe operators so they’re on the floor making parts the day they get back.”

DALE MCCURRY, MASTER CHIEF PETTY OFFICER (RET) & PHILLIPS INSTRUCTOR

THE PHILLIPS EDGE

In just **two** days, participants learn these skills:

- Navigating Haas Controls
- Identification & Use of Common G & M Codes
- Identification & Use of MDI/IPS/VPS
- Probe Use
- Setting Up Machine Tool Offsets & Work Offsets
- Loading Tooling/Parts
- Best Practices to gain efficiency

Hands-On Learning for Faster, Better Results: All work is done on actual Haas machines. After Day 1, students are making parts. By Day 2, the “chips are flying!”

No Fluff: We ONLY focus on what’s essential to operating a lathe. No “History of the Lathe” in this class!

World-Class Facilities: Students learn on more than a million dollars worth of Haas machines, just like the ones in your shop. No video simulations here!

Seasoned Instructors: We’re former operators. We know what it takes - and what can go wrong - and we share it all with your employees.

Classes are offered twice a month in Rock Hill, SC.
